Browns Oxide Project – Commissioning Update First Feed to Mill

The first feed of low grade material to the grinding mill for commissioning purposes was achieved on Saturday 31 May 2008. This represents an important milestone in the Browns Oxide Project.

All installed equipment in the crushing, conveying and grinding sections of the front end of the processing plant operated satisfactorily under load. The completion of construction and continuation of the commissioning program for the plant will continue through June and into July as previously advised, prior to handover of the plant to the operations team.
