ASX Release

27 June 2008

RESOURCE UPDATES

At the Annual General Meeting of shareholders held on 22 May 2008 we projected that we would be able to publish updated resource estimates for Oxide, Sulfide and Uranium in June.

While we had anticipated receiving updated numbers from our Geological consultants before the end of June it is now apparent that these updates will not be received until July.

We will release the results when available and anticipate that this will be no later than the end of July.
